1.0 GENERAL DESCRIPTION

1.1 Introduction

NT140WHM-N31 is a color active matrix TFT LCD module using amorphous silicon TFT's (Thin Film Transistors) as an active switching devices. This module has a 14.0 inch diagonally measured active area with HD resolutions (1366 horizontal by 768 vertical pixel array). Each pixel is divided into RED, GREEN, BLUE dots which are arranged in vertical Stripe and this module can display 6-bit+FRC colors. The TFT-LCD panel used for this module is a low reflection and higher color type. Therefore, this module is suitable for Notebook PC. The LED Driver for back-light driving is built in this model. All input signals are eDP interface compatible.

1.2 Features

- 1 Iane eDP Interface with 1.62Gbps Link Rates
- Thin and light weight
- 6-bit+FRC color depth
- Single LED Lighting Bar. (Down side/Horizontal Direction)
- Data enable signal mode
- Side Mounting Frame
- Green Product (RoHS & Halogen free product)
- On board LED Driving circuit
- Low driving voltage and low power consumption
- On board EDID chip

1.4 General Specification

The followings are general specifications at the model NT140WHM-N31 (listed in Table 1.)

<Table 1. General Specifications>

Parameter	Specification	Unit	Remarks
Active area	309.40(H) ×173.95(V)	mm	
Number of pixels	1366 (H) ×768 (V)	pixels	
Pixel pitch	0.2265(H) ×0.2265 (V)	mm	
Pixel arrangement	RGB Vertical stripe		
Display colors	6-bit+FRC	colors	
Display mode	Normally White		
Dimensional outline	320.9(H)*205.6 (V)*3.0(Max)	mm	
Weight	275(max)	g	
Surface treatment	Glare (Clear Black)		
Back-light	Down edge side, 1-LED Lighting Bar type		Note 1
	PD : 0.6	W	
Power consumption	PBL :2.0	W	
	Ptotal :2.6	W	

Notes : 1. LED Lighting Bar (27*LED Array)

2.0 ABSOLUTE MAXIMUM RATINGS

The followings are maximum values which, if exceed, may cause faulty operation or damage to the unit. The operational and non-operational maximum voltage and current values are listed in Table 2.

< Table 2. Absolute Maximum Ratings>

Ta=25+/-2°C

Parameter	Symbol	Min.	Max.	Unit	Remarks	
Power Supply Voltage	V _{DD}	-0.3	4.0	V	Noto 1	
Logic Supply Voltage	V _{IN}	V _{ss} -0.3	V _{DD} +0.3	V	Note 1	
Operating Temperature	T _{OP}	0	+50	°C	Nata 0	
Storage Temperature	T _{ST}	-20	+60	°C	Note 2	

Notes : 1. Permanent damage to the device may occur if maximum values are exceeded functional operation should be restricted to the condition described under normal operating conditions.

Temperature and relative humidity range are shown in the figure below.
 95 % RH Max. (40 °C ≥ Ta)
 Maximum wat hulk temperature at 20 °C or less (Ta = 10 °C). No conduction

Maximum wet - bulb temperature at 39 $^{\circ}$ C or less. (Ta > 40 $^{\circ}$ C) No condensation.

4.0 OPTICAL SPECIFICATION

4.1 Overview

The test of Optical specifications shall be measured in a dark room (ambient luminance ≤ 1 lux and temperature = $25\pm2^{\circ}$ C) with the equipment of Luminance meter system (Goniometer system and TOPCON BM-5) and test unit shall be located at an approximate distance 50cm from the LCD surface at a viewing angle of θ and Φ equal to 0°. We refer to $\theta \emptyset = 0$ (= $\theta 3$) as the 3 o'clock direction (the "right"), $\theta \emptyset = 90$ (= $\theta 12$) as the 12 o'clock direction ("upward"), $\theta \emptyset = 180$ (= $\theta 9$) as the 9 o'clock direction ("left") and $\theta \emptyset = 270$ (= $\theta 6$) as the 6 o'clock direction ("bottom"). While scanning θ and/or \emptyset , the center of the measuring spot on the Display surface shall stay fixed. The backlight should be operating for 30 minutes prior to measurement. VDD shall be 3.3+/- 0.3V at 25°C. Optimum viewing angle direction is 6 'clock.

Notes :

1. Viewing angle is the angle at which the contrast ratio is greater than 10. The viewing angles are determined for the horizontal or 3, 9 o'clock direction and the vertical or 6, 12 o'clock direction with respect to the optical axis which is normal to the LCD surface (see FIGURE 1).

2. Contrast measurements shall be made at viewing angle of Θ = 0 and at the center of the LCD surface. Luminance shall be measured with all pixels in the view field set first t o white, then to the dark (black) state .

(see FIGURE 1) Luminance Contrast Ratio (CR) is defined mathematically.

Luminance when displaying a black raster

3. Center Luminance of white is defined as luminance values of 5 point average across the LCD surface. Luminance shall be measured with all pixels in the view field set first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.

4. The White luminance uniformity on LCD surface is then expressed as : ΔY =Minimum Luminance of 5(or 13) points / Maximum Luminance of 5(or 13) points. (see FIGURE 2 and FIGURE 3).

5. The color chromaticity coordinates specified in Table 5 shall be calculated from the spectral data measured with all pixels first in red, green, blue and white. Measurements shall be made at the center of the panel.

6. The electro-optical response time measurements shall be made as FIGURE 4 by switching the "data" input signal ON and OFF. The times needed for the luminance to change from 10% to 90% is Tr, and 90% to 10% is Td.

7. Cross-Talk of one area of the LCD surface by another shall be measured by comparing the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark.

(See FIGURE 5).

Center Luminance of white is defined as luminance values of center 5 points acro ss the LCD surface. Luminance shall be measured with all pixels in the view field se t first to white. This measurement shall be taken at the locations shown in FIGURE 2 for a total of the measurements per display.

	TFT- LCD PRODUCT	А	2015.11.3
SPEC. NUMBER	SPEC. TITLE NT140WHM-N31 Preliminary Product Spec	ification	PAGE 13 OF 34
		meaton	<u> </u>

Figure 3. Uniformity Measurement Locations (13 points)

The White luminance uniformity on LCD surface is then expressed as : Δ Y5 = Mi nimum Luminance of five points / Maximum Luminance of five points (see FIGU RE 2), Δ Y13 = Minimum Luminance of 13 points /Maximum Luminance of 13 points (see FIGURE 3).

The electro-optical response time measurements shall be made as shown in FIG URE 4 by switching the "data" input signal ON and OFF. The times needed for th e luminance to change from 10% to 90% is Td and 90% to 10% is Tr.

Where:

 Y_A = Initial luminance of measured area (cd/m²) Y_B = Subsequent luminance of measured area (cd/m²) The location measured will be exactly the same in both patterns

Cross-Talk of one area of the LCD surface by another shall be measured by com paring the luminance (YA) of a 25mm diameter area, with all display pixels set to a gray level, to the luminance (YB) of that same area when any adjacent area is driven dark (Refer to FIGURE 5).

1'	11.0 RELIABILITY TEST The Reliability test items and its conditions are shown in below. <table 10.="" reliability="" test=""></table>								
	No		Test Items	-	onditions				
	1	High temp	erature storage test	Ta = 60 ℃, 240 hrs					
	2	Low tempe	erature storage test	Ta = -20 ℃, 240 hrs					
	3	High temp operation	erature & high humidity test	Ta = 50 ℃, 80%RH, 240 hrs					
	4	High temp	erature operation test	Ta = 50 ℃, 240 hrs					
	5	Low tempe	erature operation test	Ta = -5 ℃, 240 hrs					
	6	Thermal s	hock	Ta = -20 $^{\circ}$ C \leftrightarrow 60 $^{\circ}$ C (0.5 hr), 100 cycle					
	7	Vibration t (non-opera		1.5G, 10~500Hz, Half Sine X,Y,Z / Sweep rate : 1 hour					
	8	Shock test (non-opera		220G, Half Sine Wave 2msec $\pm X, \pm Y, \pm Z$ Once for each direction					
	9	Electro-sta (non-opera	atic discharge test ating)	Air : 150 pF, 330Ω, 15 KV Contact : 150 pF, 330Ω, 8 KV					

12.0 HANDLING & CAUTIONS

- (1) Cautions when taking out the module
 - Pick the pouch only, when taking out module from a shipping package.
- (2) Cautions for handling the module
 - As the electrostatic discharges may break the LCD module, handle the LCD module with care. Peel a protection sheet off from the LCD panel surface as slowly as possible.
 - As the LCD panel and back light element are made from fragile glass material, impulse and pressure to the LCD module should be avoided.
 - As the surface of the polarizer is very soft and easily scratched, use a soft dry cloth without chemicals for cleaning.
 - Do not pull the interface connector in or out while the LCD module is operating.
 - Put the module display side down on a flat horizontal plane.
 - Handle connectors and cables with care.
- (3) Cautions for the operation
 - When the module is operating, do not lose CLK, ENAB signals. If any one of these signals is lost, the LCD panel would be damaged.
 - Obey the supply voltage sequence. If wrong sequence is applied, the module would be damaged.

	TFT- LCD PRODUCT	А	2015.11.3	
SPEC. NUMBER	SPEC. TITLE	SPEC. TITLE		
	NT140WHM-N31 Preliminary Product Specification 25 OF 3			

- (4) Cautions for the atmosphere
 - Dew drop atmosphere should be avoided.
 - Do not store and/or operate the LCD module in a high temperature and/or humidity atmosphere. Storage in an electro-conductive polymer packing pouch and under relatively low temperature atmosphere is recommended.
- (5) Cautions for the module characteristics
 - Do not apply fixed pattern data signal to the LCD module at product aging.
 - Applying fixed pattern for a long time may cause image sticking.
- (6) Other cautions
 - Do not disassemble and/or re-assemble LCD module.
 - Do not re-adjust variable resistor or switch etc.
 - When returning the module for repair or etc., Please pack the module not to be broken. We recommend to use the original shipping packages.
